1. Win SCP

Win SCP is a program which is necessary for configuration off the Oliva Flexbox.
The program can be downloaded here;
WinSCP :: Official Site :: Download
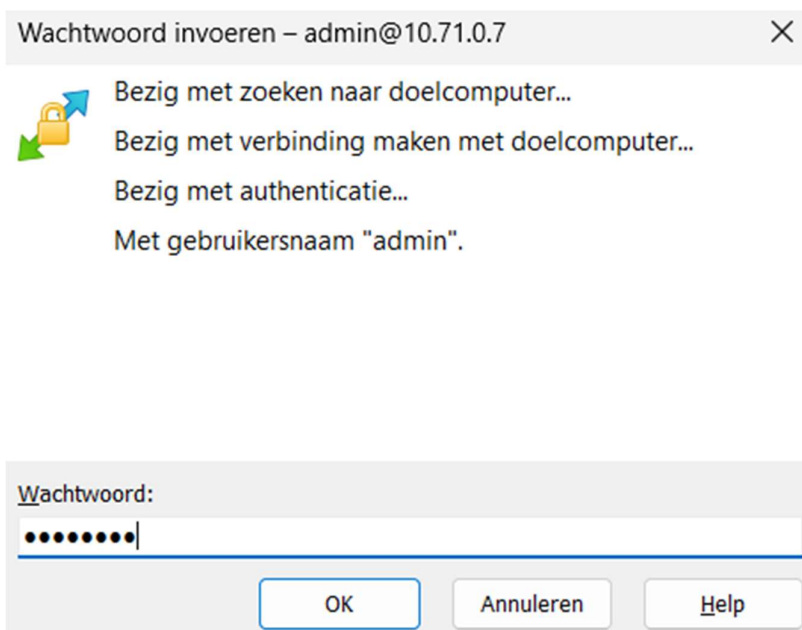

To access the configuration file, you need to have the IP address of the flexbox.
This can be the IP address locally or the programmed IP address of the flexbox which is connected with the Oliva cloud.

Fill in the IP address as below.

Fill in the password to log in on the Flexbox.

After logged in, you see the config.json file.
Double click on that, and it will guide you to the configuration file.
Check the manual for each interface to fill in the correct requirements.

/opt/plcnext/config/
